

Nimbus Cloud Storage

User Guide & Reference — Version 4.2

Overview

Nimbus Cloud Storage is a file synchronization and backup service for individuals and small teams. This guide covers account setup, storage plans, security practices, sync behavior, and support policies. Nimbus was founded in 2019 and is headquartered in Portland, Oregon.

All plans include automatic versioning, meaning every file keeps a history of its last 30 changes regardless of plan tier. Deleted files remain recoverable from the trash for 45 days before permanent removal.

Storage Plans

Nimbus offers three plans. The Starter plan costs \$4.99 per month and includes 100 GB of storage with a single-user seat. The Team plan costs \$12.99 per month per seat and includes 2 TB of pooled storage shared across up to 10 seats. The Enterprise plan is billed annually at custom rates and includes unlimited storage, a dedicated account manager, and a guaranteed 99.95% uptime SLA.

Upgrading between plans takes effect immediately and is billed on a prorated basis. Downgrading takes effect at the start of the next billing cycle. There is no fee for changing plans.

Maximum File Size by Plan

Plan	Max file size	Max seats
Starter	5 GB	1
Team	20 GB	10
Enterprise	500 GB	Unlimited

Security & Privacy

All files are encrypted with AES-256 at rest and TLS 1.3 in transit. Nimbus does not have access to unencrypted file contents on the Enterprise plan, which supports customer-managed encryption keys. Starter and Team plans use Nimbus-managed keys.

Two-factor authentication is available on all plans and is required by default for Enterprise accounts. Supported second factors are TOTP authenticator apps and hardware security keys (FIDO2). SMS-based codes are not supported due to known interception risks.

In the event of a data breach affecting customer files, Nimbus commits to notifying affected account owners within 72 hours of confirming the breach.

Sync Behavior

The desktop client checks for changes every 15 seconds while active. If two devices edit the same file offline and reconnect, Nimbus keeps both versions and appends "(conflicted copy)" to the older file's name rather than overwriting either version.

Selective sync lets a user exclude specific folders from being downloaded to a given device while keeping them backed up in the cloud. Excluded folders can be re-enabled at any time without re-uploading anything, since the cloud copy is untouched.

The mobile app only supports read access and manual uploads — it does not run continuous background sync, in order to conserve battery and mobile data.

Support Policy

Starter plan customers receive email support with a target response time of 2 business days. Team plan customers receive priority email and chat support with a target response time of 4 business hours. Enterprise customers receive 24/7 phone support with a 30-minute target response time for outages classified as critical.

Refunds are available within 14 days of a new subscription purchase, and are prorated for annual plans cancelled after that window. Nimbus does not offer refunds for partial months on monthly plans.

To close an account, a customer must submit a request through the billing portal; accounts cannot be closed by simply cancelling the payment method. Account data is retained for 30 days after closure in case of accidental cancellation, then deleted permanently.
